WORK EXPERIENCE

Shawnee State University - Resident Assistant | 2024-2025

- Managed ~50 residents, mediated conflicts, scheduled and conducted regular building meetings, and planned campus events under a strict budget
- Assisted in disaster relief immediately following major flooding

EDUCATION

Shawnee State University - Bachelor's Degree in Digital Simulation & Game Programming | 2025

- Gained experience working in programming languages like **Python**, **C/C#/C++**, **GDScript**, JavaScript, and Assembly, as well as learning engines like **Godot**, **Unreal**, and **Unity**, along with more technical classes covering operating systems, rendering using Vulkan, concurrency, algorithms, networking, AI, compiler design, and optimization techniques, as well as select courses from the Sound Design minor.
- Worked as a supplemental instructor, assisting students with debugging, understanding concepts, and any questions pertaining to the Game Programming Foundations, Systems Programming, and Data Structures classes.
- Introduced to project management strategies like scrum and the agile workflow utilizing tools like **ClickUp/Trello**, and version control with **Git** and **Perforce**.

PREVIOUS PROJECTS

Gnomad - JollyWare | 2024-Present | Unity, C#, Yarn Spinner, Reaper, Audacity

- As audio lead, I created SFX systems, integrated audio across prefabs, and contributed to immersive world-building. I also assisted in refactoring enemy AI/behavior scripts, designing NPCs (Yarn Spinner), and building puzzles/level segments, as well as the assets used in them.
- Learned and built upon an existing codebase, aligning with studio standards for a future Steam release, as well as bolstering the business aspect of the studio.

Isles of Aether - Snow Day Studios | 2023-2024 | Unreal 5, Meta Sounds, C++, Reaper

- Working with a 17-person Agile team, I led sound design, creating MetaSounds, blueprints, and C++ audio systems for playback of audio files made using Reaper and Audacity with samples personally recorded and sourced online.

Rascal Rumble - Independent | November 2022- January 2023 | Godot 3/4, GDScript, Audacity

- Online multiplayer competitive collectathon with multiple game modes, split-screen multiplayer, momentum-based player controller with wallrunning and a mid-air dash, complex racer AI without the need of a navmesh, and a mobile port.
- Having an initial timeline of 3 weeks, this project was a lesson to write dry code to be adaptable and scalable. That lesson was used when a refactor built in Godot 4 began.

Lil' Bro - SSU Spring Game Jam 2025 | Godot 4, GDScript, Reaper, Audacity

- Designed AI behavior for sibling, sound effects, and two level segments (Fear the Forgotten, Trash Lord) featuring unique mechanics in a 7-day jam. A mechanic utilizing the mic to interact with the sibling is also included. The core gameplay loop was implemented in only a few hours via a streamlined 3-person team, avoiding bottlenecks from larger groups.
- This project utilized recycled assets to serve as a "virtual museum" of past jams, with each section featuring a unique gimmick based on the game it comes from. This particular game actually found itself a speedrunner after the completion of the jam.

Personal Godot Toolkit - Independent | Ongoing | Godot 4, GDScript

- Developed an add-on to streamline recurring workflows between projects. Dialog and audio systems are integrated from previous projects, as well as new tools for creating animations via VR motion-capture, realtime mouth animation with phoneme detection, pseudo eye-tracking, a chord-based MIDI composer (exportable for DAWs), and auto-formatting menus.
